Advanced usage

Advanced

AsciiDoc supports many advanced features such as:

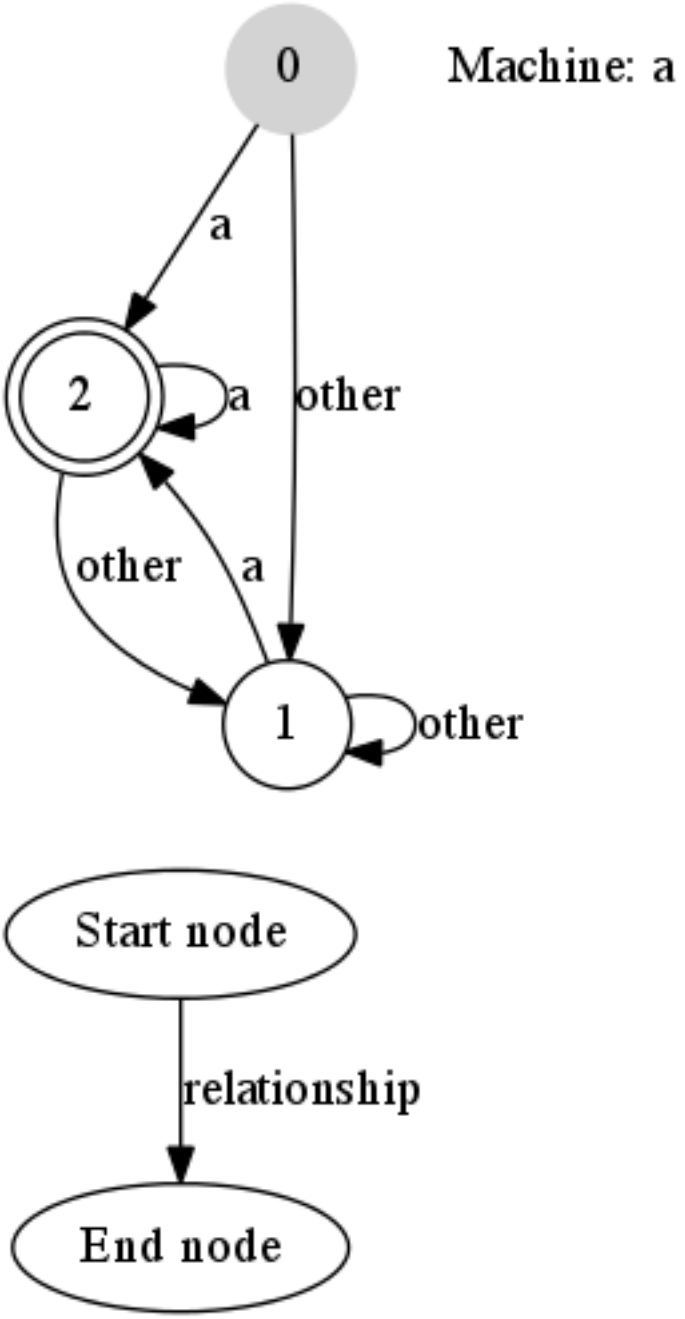
- Creating a graphviz image
- Adding callouts
- QR code library
- Macros to include system commands
- Loading a CSV file into a table
- Conditional inclusion macros
- Embedding images in data-uri for XHTML output

Embed images in data-uri

This is built-in to AsciiDoc and enables you to convert your PNG images into base64 encodings that are included in the HTML output file. This avoids having to distribute the images files. Read the AsciiDoc documentation for instructions using :data-uri:.

Graphviz charts

This requires that you install Graphviz on the computer that generates output.



Callouts

Callouts functionality is built into AsciiDoc. Read the AsciiDoc documentation for instructions.

MS-DOS directory listing.

```

---------------------------------------------------
```

```
❶ This directory holds MS-DOS.
❷ System startup code for DOS.
❸ Some sort of Windows 3.1 hack.
```

QR Code

This requires that you install qrencode and the qrcode plugin for AsciiDoc on the computer that generates output.

Macros

Run script on your system and incorporate that into the documentation.

```
-rw-r--r--  1 shawn  staff  2899 Nov  1 17:04 README.asciidoc
-rw-r--r--  1 shawn  staff  7126 Nov 15 23:39 sample_conversions.asciidoc
```

External scripts

For example, run an external script such as a pychart and then load the resulting image.
